(40' PRODUCT)

MODERN ELEVATION

Initials: Initials: Initials:

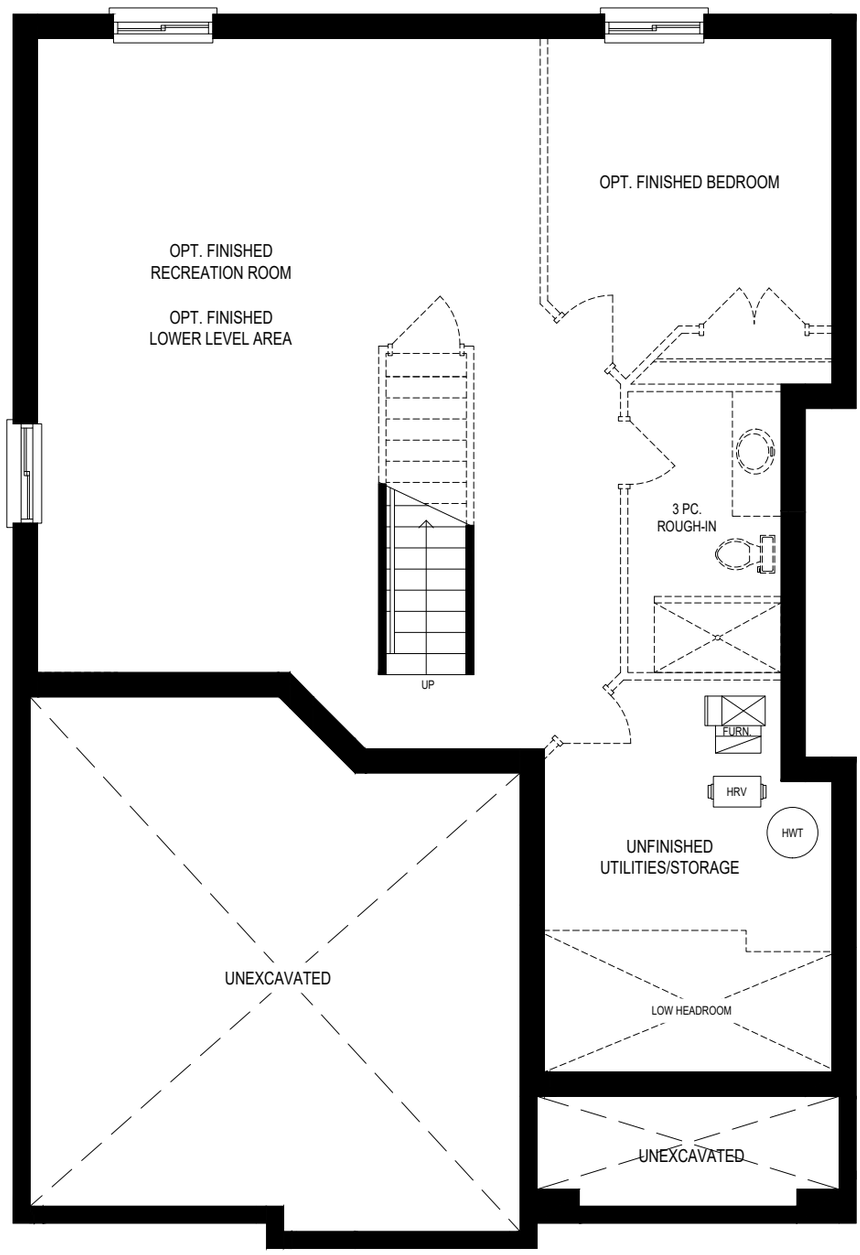

Actual usable floor space may vary from the stated floor area. Due to site conditions and engineering or structural requirements, individual room dimensions shown in the Vendor’s marketing materials are not warranted and do not form part of this contract. Construction of dwelling may not be as shown. Some features shown may be optional extras at additional cost. Exterior elevations, renderings or sketches are subject to architectural controls, the availability of materials to the Vendor during the construction of the Dwelling, the applicable Floor Plan and site conditions. Some windows shown on side and rear elevations may not be available or may be altered due to the applicable side yard setback or rear yard elevation. Accordingly, all details, dimensions, treatments, specifications and features shown may be changed by the Vendor, the Municipality, the Developer or the Vendor’s control architect, in their sole and unfettered discretion at any time without notice. Total square footage measurements are warranted by the Vendor, subject to the measurements and tolerances prescribed by HCRA Directive dated February 1, 2021, updated March 22, 2021 - Floor Area Calculations, formerly Bulletin 22 published by the Tarion Warranty Corporation which are as follows: the floor area of the house is the total area of each floor above grade measured as follows: (1.) For interior townhomes: from the centreline of the common wall to the centreline of the common wall; (2.) For end unit townhomes or semi-detached homes: from the centreline of the common wall to the exterior face of the outside wall; or (3.) for single detached dwellings: from the exterior face of an outside wall to the exterior face of the opposite outside wall, less any openings to the floor below which are not associated with stairs. Stairs may be included (the area of treads and landings). However, if the opening in the floor is oversized (larger than the actual area of the stairs), that extra open area (outside the limits of the treads and landings) must be deducted from the floor area calculation. A tolerance of 2.0% on the total area measurement is acceptable. The area of the garage is excluded from the floor area calculation, but any finished year-round habitable space above the garage is included. Finished and enclosed atrium or sunroom areas meant for year-round use may be included in the calculation. The area of any open balconies or enclosed balconies are not to be included in the calculation. Finished area, where all or part of the area is below the first storey (finished basements, including walk-outs), may be include in the total floor area figure, but must also be specified separately. Measurements for this ‘finished lower level or finished basement’ space are to the exterior surfaces of foundation walls, to the centre lines of demising walls. Some windows shown on side elevations may not be available due to the applicable side yard setback. The location of fixtures such as electrical panels, hot water tanks, sump pumps or furnaces may change due to site conditions or engineering requirements. Features identified as “Optional” or “Opt” are an additional cost, and may not be available based on the stage of construction of the home. Features shown “where grade permits” or “subject to grading” may not be available based on the grading of the land, and may in some cases require adjacent floor areas to be lowered by one riser, or “sunken”. E & OE June 20, 2024 11:02 AM.
